Name: Satyam Pandey **Roll No:** 2401074 **Subject:** AISC

Expt No. 6: To study and Implement Agile Software Project lifecycle using Jira with DevOps Pipeline Integration.

Project Name: (Laundes Space)

Project Key: LAUN

Collaborator Email: poojarykeerthan163@gmail.com, phaleharsh90@gmail.com

GitHub Repository: SatyamPandey-07/WorkSphere

STEP-BY-STEP PROCEDURE

Step 1: Scrum Project Creation & Team Member Invitations

1. Navigate to Atlassian Jira Cloud and log in to the workspace.
2. From the global navigation bar, select **Projects** (or **Spaces**) → **Create project**.
3. Select the **Scrum** methodology template under the *Software Development* category and set the project type to **Team-managed**.
4. Configure project properties:
    - **Project Name:** Laundes
    - **Project Key:** LAUN
5. Click **Create project**.
6. Navigate to the top navigation bar, click the **Add people / Team** icon, enter collaborator email poojarykeerthan163@gmail.com, phaleharsh90@gmail.com assign project access permissions as **Member**, and dispatch the invitation.

Step 2: Epic Definition & Product Backlog Population

1. Open the left sidebar and select the **Backlog** view.
2. Access the **Epics panel** and create the primary delivery epics:
    - **Epic 1:** Improve Customer Service (Color: Purple)
    - **Epic 2:** Increase Product Page Conversions (Color: Green)
3. Populate the Product Backlog by clicking **+ Create issue** and creating the core stories and tasks:
    - LAUN-4: Provide live chat as a feature (Story)
    - LAUN-5: Add WhatsApp chat to our website (Task)
    - LAUN-6: Add Facebook messenger chat to our website (Task)
    - LAUN-7: Create a video based knowledge base (Story)
    - LAUN-8: Create a review based system for collecting reviews (Story)

4. Open each issue detail view and link them to their respective parent Epics via the **Parent** field.
5. Establish work item dependencies:
    - Open story LAUN-4 (Provide live chat as a feature).
    - Click **Link issue** (chain icon).
    - Set dependency type to **is blocked by** and select child tasks LAUN-5 and LAUN-6.

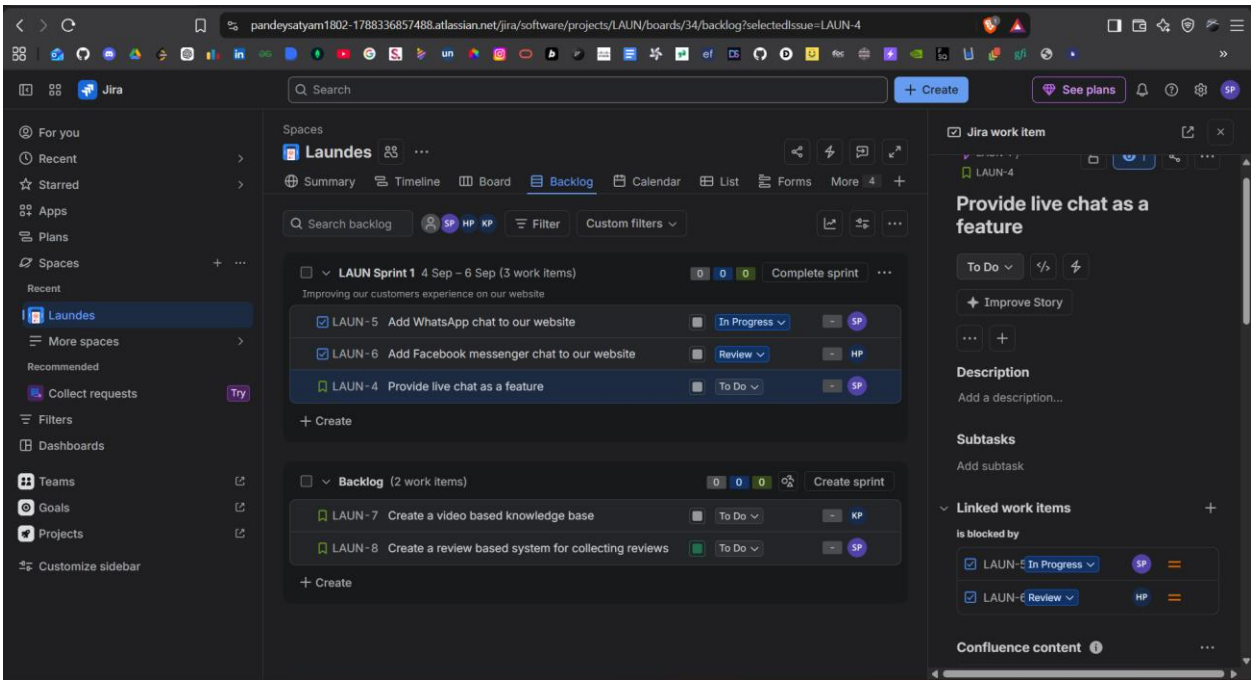

Figure 2: Product Backlog view displaying all items assigned to Epics, alongside the issue detail pane showing the "is blocked by" dependency link.

Step 3: Sprint Planning, Sprint Backlog & Board Customization

1. In the Backlog view, select the active sprint container (LAUN Sprint 1 / Scrum Sprint 1).
2. Click the three dots (⋯) on the container header → **Edit sprint**, and define the sprint scope:
    - **Sprint Name:** Scrum Sprint 1
    - **Duration:** Custom (**aaj ya kal ka date**)
    - **Sprint Goal:** Improving our customers experience on our website
3. Drag LAUN-4, LAUN-5, and LAUN-6 into the sprint container (forming the **Sprint Backlog**), leaving LAUN-7 and LAUN-8 in the lower container (remaining **Product Backlog**).
4. Click **Start sprint** to initialize the live Scrum board.
5. In the **Board** view, click the + icon on the far right column header.

Name: Satyam Pandey **Roll No:** 2401074 **Subject:** AISC

6. Create a custom status column named **Review** and position it between **In Progress** and **Done**.
7. Transition task LAUN-5 to **In Progress** and LAUN-6 to **Review** to model workflow progression.

Step 4: GitHub Integration with Jira Cloud

1. In Jira, navigate to **Apps** → **Explore more apps** (or open the </> Development / </> Code tab in the project header).
2. Install and launch the official **GitHub for Jira** application.
3. Select **GitHub Cloud**, complete OAuth authorization via Atlassian, and connect the profile (SatyamPandey-07).
4. Under repository selection, grant access permissions specifically to the repository: SatyamPandey-07/WorkSphere.
5. Confirm that the repository displays an active green **Connected** status inside Jira.

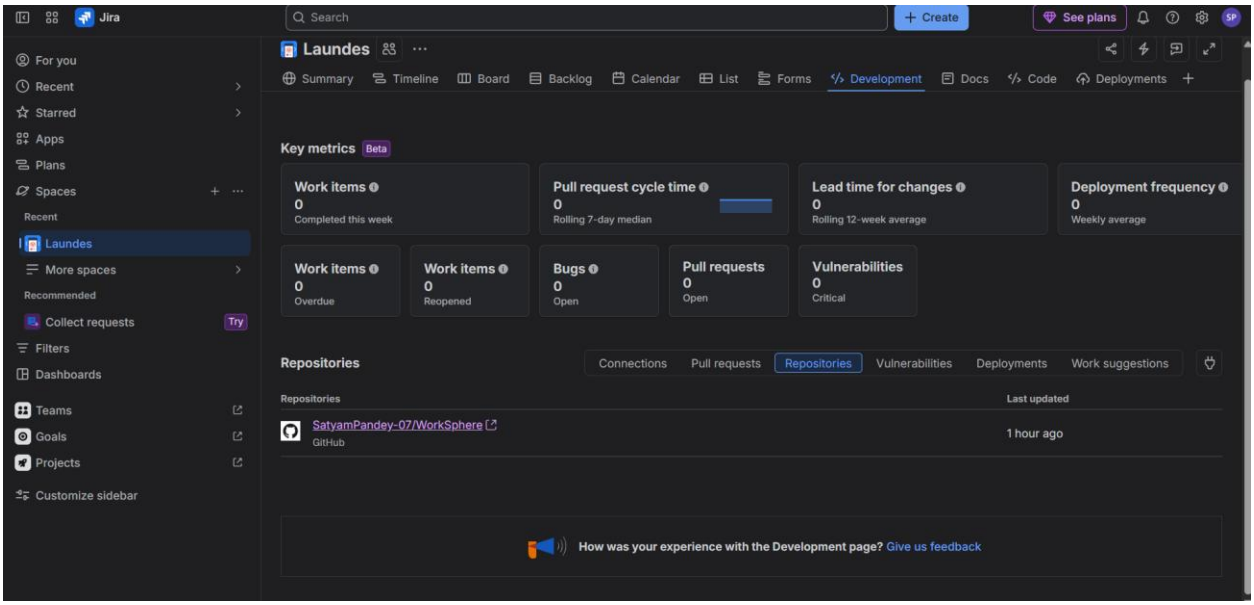

Figure 4: GitHub for Jira connection management page confirming successful linkage of repository SatyamPandey-07/WorkSphere.

Step 5: Code Commit & Automated Smart Commit Synchronization

1. Open the linked GitHub repository (SatyamPandey-07/WorkSphere) in the web browser.
2. Edit a repository file or push changes from a local terminal.

Name: Satyam Pandey **Roll No:** 2401074 **Subject:** AISC

3. Construct a standard Git commit message incorporating the Jira issue key and the Smart Commit workflow transition tag:

LAUN-5 Add WhatsApp chat integration #done

4. Commit directly to the main branch.

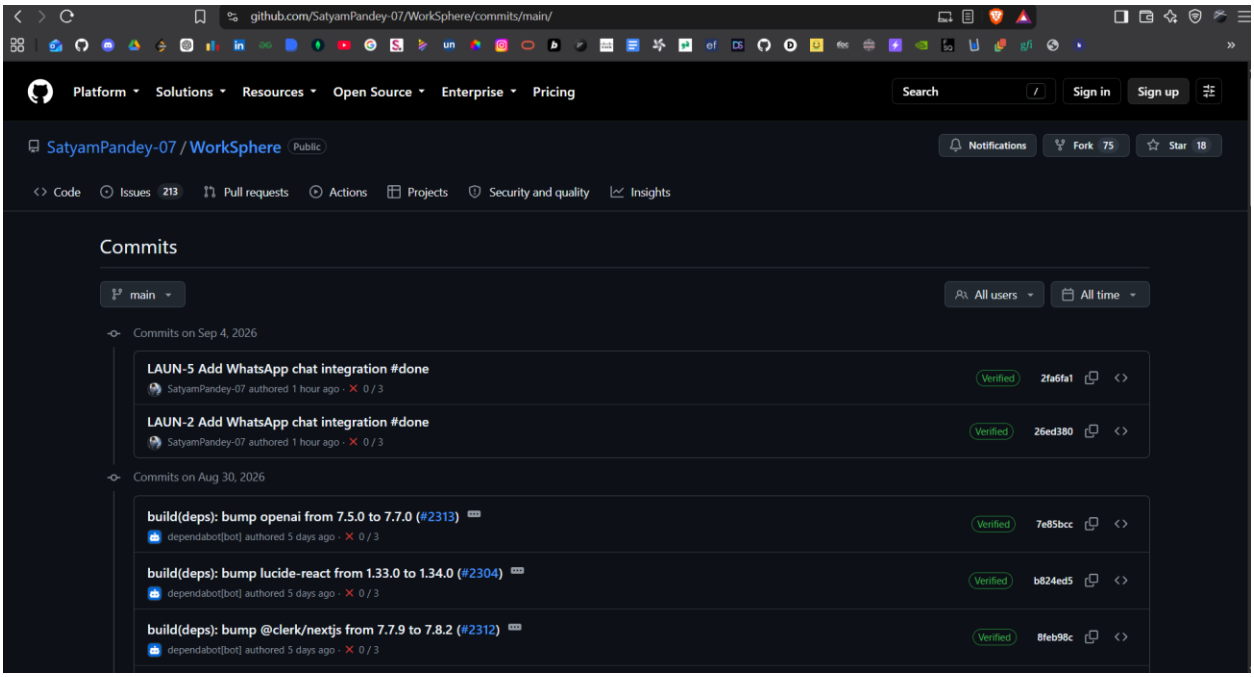

Figure 5A: GitHub repository commit history displaying the commit message referencing issue key LAUN-5 *and the* #done *smart command.*

Step 6: Verification of Live Reflection in Jira

1. Switch back to the Jira project board and refresh the browser interface.
2. Open issue LAUN-5 (Add WhatsApp chat to our website).
3. Verify the **Development** section in the right-hand details panel:
    - It displays **1 commit** linking directly to the Git commit hash in the SatyamPandey-07/WorkSphere repository.
4. Verify the issue status:
    - The status has automatically transitioned from **In Progress** to **Done** via the #done Smart Commit directive without manual board updates.
